Distributed Computer Systems Laboratory, 2024-25 edition – Rules of Engagement

1. The course is intended for all 1st level students of Comp7uter Science eager to learn about the techniques of implementing and analysis of distributed computer systems.
2. Java language has been selected due to its high versatility and efficiency regarding the distributed applications, both in end-user and corporate environments. Both Standard Edition and Enterprise Edition are to be used during the exercises.
3. Any Integrated Development Environment (IDE) can be used for the course. My personal choice is **Apache NetBeans**.
4. The course is planned for **12** weeks of the semester. There are 11 tasks planned, the 12th meeting will be devoted to propose grades to the students and resolve all the conflicts and clear all doubts.
5. Attendance during the laboratories is obligatory. You are allowed to be absent **3** times without any explanation. If there are more, we will be solving the issue individually.
6. Homeworks provided to do for each meeting are obligatory. To pass the course, you need to return at least **6** tasks. The more the student sends, the higher the chance for the better grade.
7. In case the student fails to meet conditions 5 and 6, two alternatives arrive:
    a. He/she fails the laboratory
    b. He/she is given a chance to pass the course based on the individual programming project assigned by the lecturer.

   Selection of one of these two options depends on he lecturer's humor 😊.
8. Upon all students' agreement laboratories may be recorded.
9. The rules regarding the final grade are subject to change (in favor of students) if needed.
